Take a break, sit back, and give your right brain something to do. It's your standard crossword.

- 1. The second part of a variable declaration
- 4. namespace, for, while, using, and new are examples of _____ words
- 6. What (int) is doing in this line of code: x = (int) y;
- 8. When an object no longer has any references pointing to it, it's removed from the heap using _____ collection
- 10. What you're doing when you use the + operator to stick two strings together
- 14. The numeric type that holds the biggest numbers
- 15. The type that stores a single letter or number
- 16. \n and \r are _____ sequences
- 17. The four whole-number types that only hold positive numbers

Down

- You can combine the variable declaration and the ______
 into one statement
- 3. A variable that points to an object
- 5. What your program uses to work with data that's in memory
- 7. If you want to store a currency value, use this type
- 9. += and -= are this kind of operator
- 11. A variable declaration always starts with this
- 12. Every object has this method that converts it to a string
- 13. When you've got a variable of this type, you can assign any value to it

It's time to give your left brain a break and put that right brain to work: all the words are object-related.
